The Future of Internet and Telephone Services

Converged Access

Business Telephone Service and Internet Access

DakotaPro Converged Access is an integrated solution that bundles primary communications needs into a single solution:

Competitively positioned, DakotaPro Converged Access is priced competitively to save you \$\$\$ on your business phone service!

Dynamic bandwidth allocation maximizes the balance between voice and data.

You can port telephone numbers from your previous provider.

DakotaPro Converged Access is a good transitional product that allows you to expand into business grade VOIP technology without having to replace existing analog phones, private branch exchange (PBX) and key system telephone equipment.

Using VOIP network technology of the highest quality, DakotaPro Converged Access provides a more flexible and cost effective communication solution than traditional phone lines.
